Electrical Installation Advance Apprenticeship

Overview

R&S Building Services Engineers is a medium sized business established in 1988 providing mechanical and electrical services to a variety of clients many of whom are 'Blue Chip' companies.

Role

This role is a full time role over a 4 year period.

In this role the candidate will be required to undertake a 4 year Electrical Installation Advance Apprenticeship which will consist of an NVQ at Level 3 and a City & Guilds Course based at Gloucester College.

The role is predominantly site based; carrying out installation, maintenance, inspection and breakdown activities on electrical infrastructures in commercial premises. The candidate will primarily be working within the Electrical team, during the first period of the apprenticeship the successful candidate will be expected to work alongside skilled members of the team supporting their efforts to achieve the team objectives whilst learning from them the skills and knowledge required to progress the apprenticeship to the next level. As the apprenticeship progresses the role will change with the candidate expected to become more and more self sufficient, take on more individual responsibility and become more independent of the other members of the team eventually working alongside a skilled electrician completing the same work.

At the successful completion of the apprenticeship the candidate will have obtained a nationally recognised Level 3 NVQ in electrical installation and a City & Guilds qualification to match.

R&S require all employees to be flexible in their work environment, during the initial stages of the apprenticeship the candidate will be expected to fulfil the role of Electrical Assistant when working with a electrician. On other occasions the candidate may be required to take responsibility for and carry out roles which may not fall directly under his/her job description. In such cases the individual is expected to cooperate with the company and complete the tasks as requested. Additional training will be given for these additional roles, (if required) and a person will not be required to carry out such tasks unless they have been deemed competent to do so.

The work will be carried out within an industrial/commercial environment on Client's premises, the candidate will be expected to travel as part of his/her roll and the job will involve night working as well as working away from home.

It should be noticed that at the end of the apprenticeship there is no guarantee of future employment with R&S Building Services Engineers Ltd.
